Scope / conditions

The import provisions apply to certain animals and animal products for research, analysis, testing and development. See also "Special provisions" and "Further info" > "[Information approval procedure](#)".

Animal health import permit

Animals and animal products should always be imported under the import provisions applicable to the relevant products. Please refer to the appropriate chapters for information.

In the case of consignments that cannot fulfill these requirements, the FSVO can, in individual cases, issue import licences. This is possible on the condition, among others, that correct import and use can be ensured and monitored from the border crossing until the goods are disposed of correctly. Animals and animal products of this type must under no circumstances be placed on the market or come into contact with marketable animals or animal products.

If the purpose is fulfilled, the animal products have to be re-exported to their country of origin or disposed of in accordance with regulations.

Further conditions for issuing import licences and the permitted types of disposal can be found in the "[Information approval procedures](#)" document (see "Further info" below). An [import application](#) completed in full must be submitted to the FSVO (see "Import permit applications").

Overarching protective measures

The [protective measures](#) in force on the day of import apply in all cases .

Inspection on entry into the country

Direct import by air

The shipment undergoes veterinary inspection on arrival at the Swiss airport (Zurich or Geneva) if required.

Import via the EU

The veterinary control is normally carried out at the point of first entry into the EU. The importer must contact the relevant EU border control post to obtain information about prior notification of the shipment and any additional provisions that may be applicable.

The CHED issued by the border control post must be present when the Swiss border is crossed and must accompany the shipment until it reaches the establishment of destination.

Miscellaneous

Certain animal species are additionally subject to species conservation provisions. Specimens or samples from protected species require an import licence from the veterinary health authority (except blood and tissue samples of apes listed in CITES Appendices II (for the pharmaceutical industry)) and a CITES export licence issued by the country of origin.

Such shipments must be notified to the customs authority and presented to a species conservation control office within 48 hours (two working days). Blood and tissue samples of apes listed in CITES Appendices II (for the pharmaceutical industry) are exempt from physical inspection. In such cases, only the documents have to be inspected (see “Species conservation control without an import licence” document under “More information”).

The fee for the species conservation control will be collected in advance by the customs authority.

Please contact the FSVO if you have any questions or require clarification.
